### Notice on Revision of Application for Pre-operational Confirmation of Shimane Nuclear Power Station Unit 2

On November 11, 2024, we have submitted an application, which reflected a revision of a reactor start-up from December 2024 to December 7, 2024, for pre-operational confirmation in relation to an operator's pre-operational inspections to the Nuclear Regulation Authority (NRA) for the restart of commercial operation of Shimane Nuclear Power Station Unit 2.

On September 11, 2023, we submitted the application to the NRA<sup>\*1</sup> and revised the application as the process of the operator's pre-operational inspections, etc. changed<sup>\*2</sup>. We have now revised the reactor start-up considering the completion of fuel loading on November 3 and the progress of the process that takes place before the reactor start-up.

Assuming that the reactor start-up on December 7, 2024 and the progress of inspections goes as planned, we will proceed the processes related to the restart as follows.

Restart	Late December 2024 (same as before)
Resumption of commercial operation	Early January 2025 (same as before)

We will continue to take all possible measures to ensure the operator's pre-operational inspections proceed steadily with safety as our first priority as well as to respond appropriately to the pre-operational confirmation conducted by the NRA, and we will prepare each and every step such as facility inspections and examination, etc. for the reactor start-up toward the restart.

There will be no impact on the full-year earnings forecasts (consolidated and non-consolidated) for the fiscal year ending March 31, 2025.

\*1 This matter was disclosed in “Notice on Submission of Application for Pre-operational Confirmation of Shimane Nuclear Power Station Unit 2” on September 11, 2023.

\*2 These matters were revised on April 30 and October 15, 2024, and were disclosed in “Notice on Revision of Application for Pre-operational Confirmation of Shimane Nuclear Power Station Unit 2” on the same days.
